

PHYSICIAN SURVEY COVID-19 IMPACT APRIL 2020

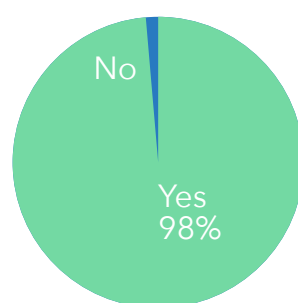

TELE-HEALTH

85% of all surveyed physicians already use tele-health.

68% of those not yet using tele-health are now considering it in light of COVID-19.

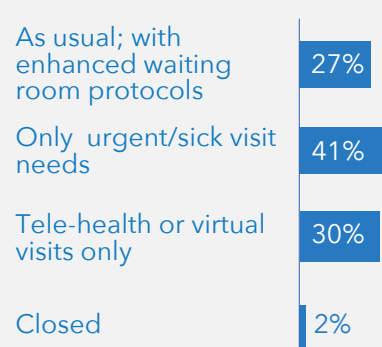

98% of physicians already using tele-health reported increased patient interest.

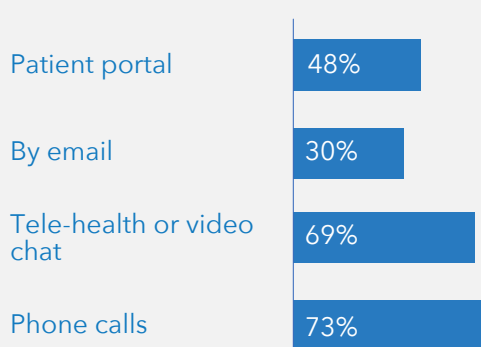

98% of physicians offering tele-health have seen **increased patient interest**

OFFICE PRACTICES

How has your office dealt with COVID-19?

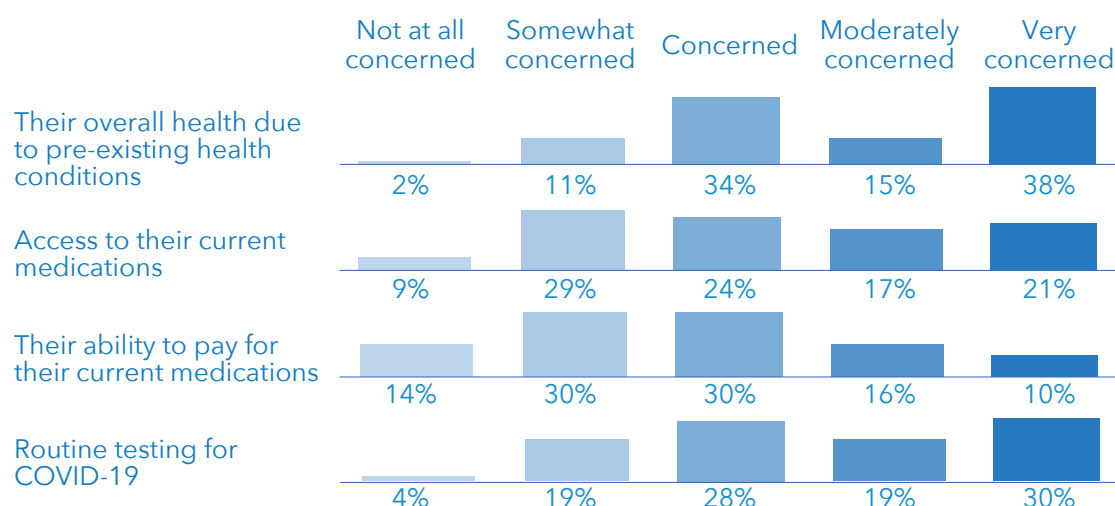

How are you getting information to patients who cannot come to the office?

73% of physicians' offices are limited to urgent/sick visits or closed

PATIENT CONCERNS

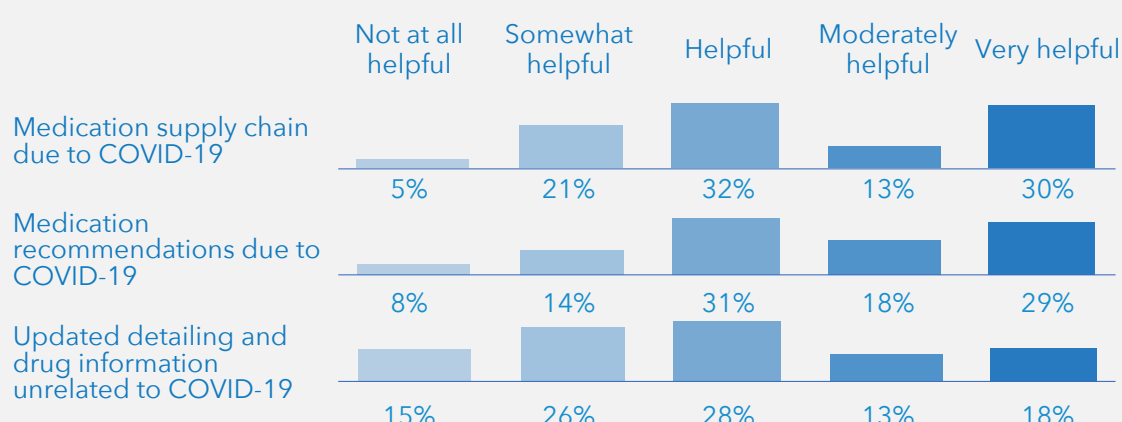

What are patients most concerned about?

38% of patients are very concerned about their overall health due to COVID-19

INFORMATION NEEDS

What information from pharmaceutical companies are most helpful?

78% of physicians agree that information from pharma companies on medication recommendations related to COVID-19 would be helpful

ABOUT THE RESEARCH

sermo

At the end of March 2020, the DHC surveyed 104 US physicians (a mix of primary care and specialists) on the SERMO network to ask them about the impact of COVID-19 on their practices and patients. The above highlights are from that research.
